

## **1. HISTORY AND MISSION**

### **1.1 MISSION STATEMENT**

To deliver a reliable supply of safe, affordable, high quality water to our members; provide exceptional service to our members; and keep informed of water issues that could affect North Prairie Rural Water District due to technology, regulations, funding or political decisions.

### **1.2 VISION STATEMENT**

North Prairie Rural Water District envisions an active role in the increasing local, regional, and National prominence that water delivery will have in the future. While recognizing the precious nature of the resource, North Prairie Rural Water District envisions system growth necessary to provide effective water access and delivery to an expanded area, application of the art water filtration and treatment procedures, and a responsiveness to the needs of our customers and community.

### **1.3 FUTURE STATEMENT**

North Prairie Rural Water District faces a future of probable national and worldwide potable water shortage. We will continue to work with NAWS and The Three Affiliated Tribes, City of Minot and our own Water treatment plant to bring a quality water source to our region. With other water users quest for quality water sources, water will become an even more precious resource.

North Prairie Rural water District, as operator of a rural water delivery system, and owner of water permits, can be considered a major player in water issues. These issues can range from water distribution, filtration, and treatment technology, to new regulations regarding sewer treatment and recycling for multiple uses.
